DETAILED ACTION

This office action is in response to the preliminary amendment, received 9/30/03, in which claims 1-167 were cancelled.

Claims 168-175 are pending.

Information Disclosure Statement

The information disclosure statement, received 9/30/03, is acknowledged. A signed copy is enclosed hereto.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 168-175 are rejected under 35 U.S.C. 103(a) as being unpatentable over Labroo et al (USPN 5,428,014).

Art Unit: 1654

The instant invention is drawn to a method for controlling the viscosity of a polymer-based tissue sealant or adhesive comprising the step of: partially cross-linking the polymer by adding a known mole percentage of a cross-linker to the polymer prior to applying the sealant or adhesive to the tissue, wherein the mole percentage is less than that which would cause complete cross-linking of the polymer.

Labroo et al. teaches transglutaminase cross-linkable polypeptides useful in tissue sealant and wound healing formations.. In a preferred embodiment, coupling is achieved by carbodiimide-mediated coupling using EDCI : 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride, to obtain the polymers. The degree of cross-linking can be varied to provide the desired mechanical properties (such as flexibility and tensile strength). Labroo discloses a tissue adhesive kit wherein the transglutaminase activator is thrombin and wherein the kit further contains a diluent. See, e.g., for example, abstract, column 13, lines 48-49, 53-54, 57-58, 66-68 and claims 35 and 36.

From the teaching of the reference, it is apparent that one of ordinary skill in the art would have had a reasonable expectation of success in producing the claimed invention. Therefore, the invention as a whole was *prima facie* obvious to one of ordinary skill in the art at the time the invention was made, as evidenced by the reference, especially in the absence of evidence to the contrary.

Conclusion

All claims are rejected.
